

World Bioenergy Association – Webinar Series 2025 (Brazil)

Future bioenergy opportunities: Emerging markets in Brazil and beyond

Date: November 4th, 2025

Time: 14.00 CET / 10.00 BRT (UTC – 3)

Registration: [Link](#)

Description:

Brazil's bioenergy sector is entering a new growth phase, expanding beyond traditional ethanol and biodiesel to supply advanced fuels, power, and heat for multiple industries. The country is positioning itself as a key player in biomethane and Sustainable Aviation Fuels (SAF), with projects under development aiming to meet both domestic and export demand by 2030.

These emerging markets are critical for Brazil to meet its Nationally Determined Contributions (NDCs) and carbon neutrality target by 2050, while offering replicable pathways for other regions. However, scaling these technologies will require infrastructure investment, clear sustainability standards, and stable market signals to attract capital and technology providers.

This webinar will explore Brazil's next frontiers in bioenergy and the opportunities for knowledge transfer to other countries. Experts will present key developments in SAF, biomethane, and second-generation biofuels, highlighting ongoing pilot projects, expected production volumes, and enabling policies. Discussions will address the technical, financial, and regulatory challenges that must be overcome to move from pilot projects to commercial-scale deployment, and how cooperation with international partners can accelerate this process.

Speakers Lineup:

Renata Isfer – CEO - Abiogás, Brazil

Oskar Meijerink – Head of Future Fuels - SkyNRG

Lucas D'Avila – New Business Management - MDC Energia

Filippe Fernandez – Commercial Director LATAM - Bunker One

The session will be moderated by WBA Executive Director Bharadwaj Kummamuru.
