

## **WBA Webinar**

### **Sustainable Aviation Fuels – What would it take for SAF to take off?**

*In collaboration with ASAFA*

**Date:** June 24<sup>th</sup>, 2025

**Time:** 10:00 CEST

**Registration:** [Link](#)

#### **Description:**

The aviation sector accounts for over 2% of global CO<sub>2</sub> emissions, and with air travel demand expected to grow, the need for effective decarbonization strategies has never been more urgent. Sustainable Aviation Fuels (SAF) offer a sustainable solution, with the potential to reduce lifecycle greenhouse gas emissions and decarbonize the aviation sector.

SAF production volumes doubled to 1 million tonnes in 2024, but this accounts for only 0.3% of global jet fuel production. This webinar, organized by **World Bioenergy Association** in collaboration with the **Asia SAF Association (ASAFA)**, will bring together experts and industry leaders to explore the latest advancements in SAF production, adoption, and policy support. We'll discuss the challenges and opportunities of scaling SAF, its role in achieving net-zero aviation, and the critical steps needed to drive global adoption.

#### **Agenda:**

Introductory remarks by WBA Executive Director, Bharadwaj Kummamuru

- **Introduction to the Asia SAF Association**
  - Speaker: *Gabriel Ho* - Founder & CSO, ASAFA
- **Policy and Regulatory developments fuelling SAF growth in Asia-Pacific**
  - Speaker: *Daniel Lee* - Public and Regulatory Affairs Manager, Neste
- **Innovations in SAF Technology Development**
  - Speaker: *Renee Wootton* - Director, New Market Development, Lanza Jet
  - Speaker: *Jonathan Wood* – Chief Commercial Officer, Nova Pangaea Technologies
- **Open Discussion**

*The session will be moderated by Bharadwaj Kummamuru, World Bioenergy Association*
